

Sample outputs: review and handoff

What this package shows

These sample files show native formats, a suggested delivery boundary and continuity across three interactions. They are not a customer order, live provider output or a claim that every Stratum offer includes these files.

Client proposal material

stratum-sample-pilot-proposal.pptx is an editable six-slide presentation with speaker notes. Its PDF is a viewing rendition of the same slides. Suggested wording remains subject to customer review before any end-client use.

stratum-sample-sow-outline.pdf is scope preparation, not a full SOW or signed contract.

Customer internal review

stratum-sample-presenter-script.pdf aligns to all six slides and provides preparation questions. It does not provide live meeting assistance.

stratum-sample-evidence-ledger.csv separates source facts, hypothesis, change request and clarification. No finding has been marked accepted or correct through a customer vote.

Pricing and approvals

stratum-sample-commercial-inputs.xlsx contains editable input cells and working formulas. No rates or effort amounts are preapproved. Missing inputs remain visible and cannot produce a plausible zero estimate.

There are no completed customer approvals in this example. The current status is suggested and review pending. The earlier four-week request remains in history without becoming an approved commitment.

Seller handoff

Confirm the current scope, permitted outputs and customer-internal versus end-client audience. Collect the missing reviewer, capacity and commercial decisions. Recheck the affected revisions.

The source inventory remains valid. The proposal, presenter material and commercial assumptions require targeted review if a change is accepted. Keep release authorization separate from drafting and review.

Availability and limitations

The public example accepts no real uploads and makes no live AI calls. It records no real purchase, email, approval or delivery. Confirm the included outputs and availability of a paid offer with Stratum.
